

No more Particles, Allergens & Contaminants in the Air

SANUVAIR® S300

Air Purification Unit with HEPA filter

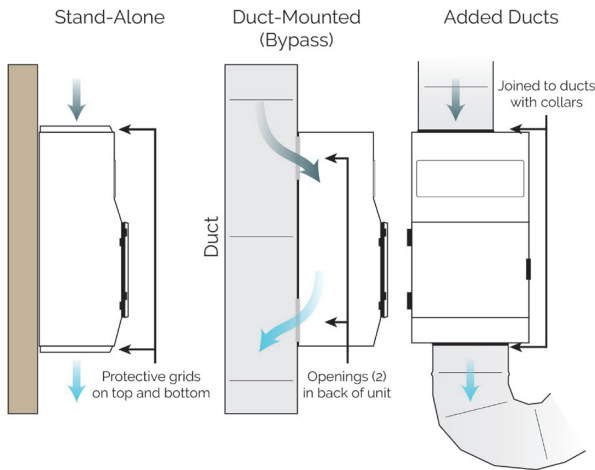

Designed for homeowners who want the combined performance of HEPA filtration, UV air purification and odor reduction in one self-contained unit.

The Sanuvair® S300 disinfects and captures airborne contaminants, odors and particles using a stand-alone unit. It has a four-step air cleaning process:

1. Mold, virus and bacteria are pulled past a J-shaped dual wavelength lamp parallel to airflow inside an aluminum reflection chamber, for maximum UVC disinfection of airborne contaminants.
2. Odors and VOCs are attacked via photo-oxidation.
3. A MERV 8 pre-filter captures large particles.
4. A HEPA final filter captures 99.97% of particles of 0.3 micron and larger.

The Sanuvair® S300 is the most versatile unit Sanuvorex offers with its various installation options.

Installation (3 options)

Versatile unit that can be positioned horizontally or vertically

BENEFITS

Combined HEPA filtration and UVC purification for a complete IAQ solution in one unit

- Captures particulates
- Helps reduce airborne germs
- Helps reduce common household odors
- Offers versatile installation options

FEATURES

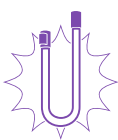

- Patented 'J' shaped lamp
- 2" pre-filter and true 2.5" HEPA Filter
- 2-speed blower: 220 or 300 cfm
- High output ballast
- Unit dimensions: 17" x 30" x 12"

WARRANTY

- Lamp: 3 years
- Ballast: 3 years
- Motor: 3 years

Purifies up to: 4,000 sq.ft.

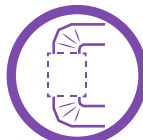

UV 'J' Lamp

Installation: Stand-alone

Installation: Duct-mounted (bypass)

Installation: Added ducts

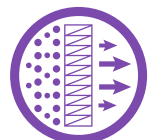

Helps reduce germs

Helps reduce odors and chemical contaminants

Helps reduce volatile organic compounds (VOCs)

HEPA filter: Helps reduce mold in the air
